REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance. The prior art made of record in the attached form PTO-892 considered to be pertinent to the submitted application.

Takenaka et al. 6,876,903 disclose a gait pattern generating device for legged mobile robot, that has the dynamic model expressing the relationship between the motion of the body and leg and floor reaction force, and determines the current time gait parameter including parameter that determine leg trajectory in response to a demand. The body trajectory is determined from the dynamic model and the parameters of the current time gait.

However, none of the prior art teaches or suggests claimed limitations in combination with:

- A gait parameter correcting means for determining an m-th gait parameter which is a gait parameter obtained by correcting a predetermined parameter to be corrected out of an (m-1)th gait parameter, from a second gate parameter to an n-th gait parameter in order by using an m-th dynamic model (m: integer satisfying $2 < m < n$), wherein each of n-1 dynamic models excluding the first dynamic model among the n dynamic models is defined as the m-th dynamic model.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
